

Technology profile in the field of Healthcare

Ref.: TOPT20180713001

Title: Portuguese SME offers and develops innovative technologies for medical robotics applications. Commercial agreement with technical assistance and services agreements are sought.

Summary:

Portuguese SME specialized in robotics has a consolidated experience in design and development of medical and wearable devices and biomedical products. The SME offers its technology and know-how of robotics, haptic devices and telemanipulation to potential partners on Horizon 2020 projects, willing to establish commercial agreements and services agreements. The partner sought is an entity which would benefit from the resulting solution from the project (no need for codevelopment).

Type and Role of Partner Sought:

The Portuguese company is looking for end users:

- Health care centres and hospitals
- Private clinics
- Patient associations
- Pharmaceutical companies, rehabilitation centres

The partner sought should be interested in establishing a commercial agency agreement with technical assistance or services agreement. Collaborations under Horizon 2020 projects with research centres and other healthcare companies are also sought.
