Visit of Latvia Delegation to Graz, Styria in Austria

8 September 2026

Participants

- **Embassy of the Republic of Latvia to the Republic of Austria**
- **Investment and Development Agency of Latvia**
- **Latvian IT Cluster** brings together Latvian technology companies and promotes digital transformation, international cooperation and ICT exports. As a coordinator of digital transformation, the Cluster is interested in cooperating with technology providers, consulting firms, and educational institutions to broaden the range of solutions that enhance competitiveness. Partnerships with public-sector organisations, including government institutions and regional agencies, support large-scale transformation and policy-driven initiatives. Cooperation with universities and research institutions enables joint research and development (R&D), talent development, and the strengthening of the innovation ecosystem. The Cluster is also interested in collaborating with industry associations, international clusters, and networks to promote cross-border cooperation, knowledge exchange, and access to new markets. URL: www.itbaltic.com
- **Rixmind** helps companies keep their IT under control. We help organizations understand what IT equipment, software, and digital services they use, how much they cost, and how to manage them efficiently. This means fewer unnecessary expenses, clearer processes, and smoother day-to-day work for employees and IT teams.. URL: <https://rixmind.com/>
- **LMT Innovations** is a telecom operator based out of Northern Europe focused on empowering society through mobile technologies. Combining a strong R&D background with a solid mobile network (being the most efficiently-loaded Nokia mobile network), LMT pushes the envelope and is on a constant search to reduce the obstacles of innovation. Their ****Transport Monitoring Platform (TMP)**** enables traffic monitoring and the analysis of various traffic events in an innovative and cost-effective way. Using advanced machine learning algorithms, the system transforms conventional video surveillance infrastructure into an intelligent traffic management solution. In addition to monitoring traffic, it can detect traffic events and identify traffic violations automatically. URL: <https://www.lmt.lv/en/innovations>
- **Snotor** is an international software development company with an office in Riga, specializing in custom web and mobile solutions as well as AI-powered systems for business process improvement. The company serves clients across multiple industries and helps them create scalable digital products that are precisely aligned with their business needs. URL: <https://snotor.pro/>
- From **RIX FLOW**'s perspective, we are interested in connecting with organizations that are actively pursuing business process digitalization, automation, and the adoption of Artificial Intelligence solutions. Their most recognized solution NAMEJS is an AI-enabled compliance-grade document intelligence and process automation platform positioned to become the AI-augmentation foundation for organizations who care for trusted data and documents. URL: <https://www.rixflow.lv/en>
- **Tiravu** is a roadside-assistance platform that keeps commercial fleets moving — instantly matching a broken-down vehicle with the nearest available service provider (towing, battery charge or change, tire change, fuel delivery etc.), with real-time tracking and upfront pricing, so dispatchers aren't stuck making calls and waiting for updates. For: logistics and fleet. URL: <https://tiravu.com/>
- **Sigulda Municipality** provides public services and performs the statutory functions of local government, including spatial planning, mobility, digitalisation, education, social services, culture, sports and municipal infrastructure management. The municipality also implements
